Making Math Real A Quilting Class Just For Kids**

This is a tutorial math program that Liz designed to help students in grades 3 - 6 understand math concepts and apply in a practical but unique way. The program is designed to run for 6 weeks, allowing students ample time to acquire and use the four operations and measurement skills in order to design and complete a small lap quilt of their very own!

Students will also learn the basics of quilting. They will learn how to use the sewing machine to piece and quilt their project. Students are NOT permitted to use the rotary cutters unless parents provide a safety glove (ask at the shop for details). The quilts will be completed by the students hand sewing on the binding!

Materials: The cost will include the fabric, thread, batting and rental of a sewing machine. Finished quilt will be approximately 44" x 42"

Cost: \$60.00

Time: 4:00 - 6:00 (Thursday ONLY)

Instructor: Liz*

**Liz is a licensed Tennessee teacher and certified to teach math in the elementary grades.*

***Students who participated in this program in 2009 entered their finished quilts into the Putnam County Fair and received first and third place in the children's sewing category!*
